WARSZAWA 1988

PREFACE

These are the proceedings of the 26th semester *Mathematical Problems in Computation Theory* held at the Banach International Mathematical Center in Warsaw from September 16th till December 14th 1985. The main purpose of the Semester was to create the possibility of wide contact between specialists from both East and West as well as to establish a forum for the presentation of new results in main areas of theoretical Computer Science. The Semester should also be considered as an excellent opportunity for young mathematicians, principally from socialist countries, to improve their qualifications and to stimulate their interest in Computation Theory.

About 180 specialists came to the Banach Center to attend 300 lectures on various topics. We were very happy to welcome participants from 17 countries; in particular we appreciated very much the presence of large groups from Soviet Union, USA, German Democratic Republic, Czechoslovakia and Federal Republic of Germany.

Most lectures could be classified within the following areas:

- Models in computation theory and theory of programs (determinism, nondeterminism, concurrency);
- Logic, universal algebra, combinatorics and topology in computation theory;
- Problems of computational complexity;
- Design and analysis of integrated circuits including VLSI.

This volume contains extended versions of many of the lectures and a few papers of invited lecturers who could not be present at the Banach Center. It should be stressed that some of the results published here are consequences of a joint research work of the participants during the Semester.

We thank all members of the Organizing Committee and in particular Professor S. V. Jablonskii, Professor L. Budach and Professor J. Becvar. We are grateful to Professor Cz. Olech for his help and friendly encouragement in solving all doubts and difficulties arising during the Semester.

We take the opportunity to express our gratitude to all speakers and participants for their interest and valuable contribution during the Semester. The success of the Semester is due to all of them.

We also acknowledge the excellent administrative work of Miss G. Pieścik and Miss E. Dąbrowska.

CONTENTS

Preface	5-6
A. ARNOLD, Transition systems and concurrent processes	9-20
A. ASPERTI and G. LONGO, Categories of partial morphisms and the relation between type structures. Partial variations on a theme of Friedman and Statman	21-45
J. C. M. BAETEN, J. A. BERGSTRA and J. W. KLOP, An operational semantics for process algebra	47-81
J.-P. BANATRE, Construction of parallel programs with networks of cooperating processes	83-96
L. BUDACH, The complexity of classification problems	97-113
H.-D. BURKHARD, Fairness and control	115-128
P. BURMEISTER, Closed set of universal Horn formulas for many-sorted (partial) algebras	129-143
M. CHADILI and I. GUESSARIAN, Fairness for synchronous fork-join nets	145-158
KEH-HSUN CHEN and Z. W. RAS, An axiomatic theory of information trees	159-167
G. CIONI and A. MIOLA, How to treat decision problems by different programming methodologies	169-187
J. R. B. COCKETT, Coalgebraic decision theory	189-196
B. COURCELLE, A note on the minimization of tree-automata	197-203
K. CULIK, Synchronous parallelizations of serial computer programs	205-224
K. DENECKE, Categorical equivalences of varieties generated by algebras $\forall I$ and $\forall F$	225-233
P. VAN EMDE BOAS, The second machine class 2, an encyclopedic view on the parallel computation thesis	235-256
K. INDERMARK, Functional compiler description	257-275
J. P. JONES, Elementary properties of the class of nondeterministic polynomial time computable functions	277-284
A. J. KFOURY, Square-free and overlap-free words	285-297
M. A. NOIT ABDALLAH, Finite and infinite computations of logic programs	299-313
M. NOVOTNÝ, Effective constructions of grammars	315-328
E. ORŁOWSKA, Kripke models with relative accessibility and their applications to inferences from incomplete informations	329-339
E. W. PACKEL, The extent to which linear problems have linear optimal algorithms?	341-357
A. PETTOROSSO, Higher order generalization in program derivation	359-368
D. SCHWEIGERT, On equations of clones	369-375
D. SKORDEV, On the use of homomorphisms for proving the equivalence of some programs	377-384
M. E. SZABO, On some arithmetically expressible properties of programs	385-394
D. THÉRIN and M. SZNAJDER-GLODOWSKI, Finite categories and regular languages	395-402
W. THOMAS, Safety- and liveness-properties in propositional temporal logic: characterization and decidability	403-417

T. TINCHEV and D. VAKARELOV, Propositional dynamic logic with recursive programs	419–426
M. VENTURINI ZILLI, Countable nondeterminism and logics of programs: fair-wellfoundedness of while-programs with nondeterministic assignments of the logic ALNA	427–436
W. WECHLER, Iterative non-deterministic algebras	437–447
G. WECHSUNG, More about the closure NP	449–458
A. G. WERSCHULZ, Information based complexity and operator equations	459–486
С. Б. ГАШКОВ, О сложности приближенного вычисления непрерывных функций	487–497
Н. Н. КУЗЮРИН, О глубине булевых функций, реализуемых контактными схемами заданной сложности	499–502
С. А. ЛОЖКИН, А. И. РЫБКО, А. А. САПОЖЕНКО, Ю. ХРОМКОВИЧ, Н. А. ШКАЛИКОВА, Об одном подходе к оценке пространственной сложности схем из функциональных элементов	503–512
Х. А. МАДАТЯН, Оценка числа представительных наборов для одного класса бинарных таблиц	513–522
М. Ю. МОШКОВ, О соотношении глубины детерминированных и недетерминированных бесконтурных программ в базисе $\{x+y, x-y, 1; \text{sign } x\}$	523–529
Р. Г. НИГМАТУЛЛИН, Линейные нижние оценки сложности и их математические модели	531–542
Г. А. ТКАЧЕВ, Об эффективных нижних оценках сложности реализации функций в различных классах управляющих систем, с ограничением на структуру схем	543–555
А. Б. ФРОЛОВ, Понятие полного расширения функции частично определенной логической сети и его применение в диагностике дискретных устройств	557–571
Н. А. ШКАЛИКОВА, О реализации булевских функций плоскими и объемными схемами из функциональных элементов	573–583
Ю. И. ЯНОВ, Метод разрешения семантических свойств алгоритмов	585–597
