

## PREFACE

*This volume contains papers presented at the International Conference on COMBINATORIAL ANALYSIS AND ITS APPLICATIONS which was organized to celebrate the 35th Anniversary of the Silesian Insurgents Pedagogical College of Opole and was held in Pokrzywna (Poland), September 16–20, 1985. We gratefully acknowledge the support received from the College.*

*The editor wishes to thank the following referees who assisted him in evaluating the submitted papers: H. Fleischner, M. C. Golumbic, E. Györi, R. E. Jamison, B. Mohar, T. Nishizeki, J. Plonka, O. Pretzel, A. Proskurowski, J. R. Reay, H. Sachs, D. B. Shmoys, G. Sierksma, Z. Skupień, R. E. Tarjan, C. Thomassen, and D. R. Woodall.*

*We express our deep gratitude to Dr. Dymitr Slezion of the Pedagogical College for his untiring help with the conference organization. Last but not least, the editor thanks the Polish Scientific Publishers (PWN) and Zastosowania Matematyki for cooperation in the publication of this volume and especially Mrs. Irena Szymaniec of PWN for her excellent editorial work.*

Wrocław, December 1986

## LIST OF PAPERS

M. Borowiecki and D. Michalak, <i>On the binding number of some hallian graphs</i>	363-370
M. Chrobak and S. Poljak, <i>A generalization of Smith's theorem</i>	371-374
R. Euler, <i>Odd cycles and a class of facets of the axial 3-index assignment polytope</i>	375-386
J. Florek, <i>Graphs minimal with respect to contractions in some subfamilies of maximal planar graphs</i>	387-398
H.-D. O. F. Gronau, W. Just, W. Schade, P. Scheffler and J. Wojciechowski, <i>Path systems in acyclic directed graphs</i>	399-441
A. Gyárfás, <i>Problems from the world surrounding perfect graphs</i>	413-441
A. Idzik, <i>Characterizations of <math>m</math>-connected graphs</i>	443-448
D. Jacak, <i>Regular positive bases</i>	449-464
P. John, H. Sachs and H. Zernitz, <i>Counting perfect matchings in polyominoes with an application to the dimer problem</i>	465-477
K. Kołodziejczyk, <i>Two constructional problems in aligned spaces</i>	479-484
A. Kośliński, <i>On the normal disconnection of a tree</i>	485-495
E. Kowalska, <i>On locally tree-like graphs</i>	497-503
M. Kubale, <i>Interval edge-coloring of caterpillars with hairs of arbitrary length</i>	505-517
Z. Majcher and J. Płonka, <i>On some partitions of a graph. I</i>	519-529
M. Michalski, <i>On a class of polynomially solvable travelling salesman problems</i>	531-539
W. Piotrowski, <i>A generalization of branch weight centroids</i>	541-545
Ding Ren and J. R. Reay, <i>Areas of lattice polygons, applied to computer graphics</i>	547-556
Z. Romanowicz, <i>Geometric structure of positive bases in linear spaces</i>	557-567
W. Rytter, <i>Remarks on pebble games on graphs</i>	569-577
G. Sierksma, <i>On <math>k</math>-regular graphs containing <math>(k-1)</math>-regular subgraphs</i>	579-588
M. Škoviera and J. Širáň, <i>Oriented relative embeddings of graphs</i>	589-599
M. Skowrońska and M. M. Sysło, <i>Hamiltonian cycles in skirted trees</i>	599-610
J. Topp and W. Ulatowski, <i>On functions which sum to zero on semicycles</i>	611-617
W. Wessel, <i>Chord graphs – new means for representing graphs</i>	619-627
B. Zelinka, <i>Block-closed subgraphs and <math>q</math>-partitions of graphs</i>	629-634
Problems	635-641
